

UF Definitions — Concise Compendium (v1.0)

Date: 2025-08-06

> No theory—just definitions and the concepts they represent.

Action

Mnemo: —

Definition: A proposed change you can do now. UF judges actions only, not persons.

Inputs: description, stakes, subjects, baseline

Outputs: verdict (Right/ Wrong), reasons

Example: Share notes with consent vs. post without permission.

Baseline

Mnemo: —

Definition: What happens if we do nothing or keep the current plan. All comparisons use this.

Inputs: current outcome estimate

Outputs: reference outcome

Example: No message sent vs. send a message.

Harm (H)

Mnemo: H

Definition: Expected downside from an action, scaled to stakes. Smaller is safer.

Inputs: loss scenarios or risk summary

Outputs: harm value

Example: Lower infection risk vs. baseline after washing hands.

ReliefIndex (RI)

Mnemonic: RI

Definition: Improvement vs. baseline harm. Nonnegative means no worse than baseline.

Formula: $RI = (H(\text{baseline}) - H(\text{action})) / \max(H(\text{baseline}), \epsilon)$

Inputs: $H(\text{baseline})$, $H(\text{action})$

Outputs: $RI \in [-\infty, 1]$

Example: Baseline harm 0.30 $\rightarrow$ action harm 0.24 $\Rightarrow$ RI = 0.20.

Right (direction)

Mnemonic: RI + gates

Definition: A step that improves vs. baseline and passes all caps/gates ($\uparrow$).

Inputs: RI, caps results

Outputs: Right ($\uparrow$)

Example: Offer reversible help with consent and fairness checked.

Wrong (direction)

Mnemonic: RI + gates

Definition: A step that degrades vs. baseline or fails any cap/gate ($\downarrow$).

Inputs: RI, caps results

Outputs: Wrong ($\downarrow$)

Example: Share someone's data without consent even if helpful.

Good* (limit)

Mnemonic: AlignedLimit

Definition: Ideal endpoint: expected harm ≈ 0 and all caps/gates pass ($A \rightarrow 1$).

****Inputs:**** —

****Outputs:**** conceptual limit

****Example:**** Not a claim about today; it's a north star.

Evil (limit)

****Mnemo:**** CollapseLimit

****Definition:**** Endpoint of persistent misalignment/redline failures ($M \rightarrow 1$).

****Inputs:**** —

****Outputs:**** conceptual limit

****Example:**** Not a label for people; a limit of actions.

Harm Cap (HC)

****Mnemo:**** HCxx

****Definition:**** Maximum allowed harm by stakes (high/med/low).

****Inputs:**** stakes level

****Outputs:**** pass/fail

****Example:**** HC01: high stakes cap ≈ 0.01 ; med=5 $\times$, low=10 $\times$.

Consent (C)

****Mnemo:**** C τ

****Definition:**** Permission threshold for serious effects.

****Inputs:**** subject consent levels

****Outputs:**** pass/fail

****Example:**** C80: require ≥ 0.80 consent.

Fairness (F)

****Mnemo:**** Fxx

****Definition:**** Bound disparities across groups. Lower is fairer.

****Inputs:**** fairness measure

****Outputs:**** pass/fail

****Example:**** F05: disparity cap set to 0.05 units (tight).

Evidence Gap (EG)

****Mnemo:**** EGxx

****Definition:**** Mismatch between claims and evidence. Keep small.

****Inputs:**** claim vs. evidence

****Outputs:**** pass/fail

****Example:**** EG05: claim–evidence cap set to 0.05.

Bias (B)

****Mnemo:**** B

****Definition:**** Systematic tilt that distorts decisions. Keep within cap.

****Inputs:**** bias measure

****Outputs:**** pass/fail

****Example:**** Independent review reduces bias.

Opacity (O)

****Mnemo:**** O

****Definition:**** Lack of reasons or transparency. Keep low; explain choices.

****Inputs:**** rationale clarity

****Outputs:**** pass/fail

****Example:**** Two bullet reasons for every decision.

Reversibility (RV)

****Mnemo:**** RV

****Definition:**** How easily we can undo or repair. Prefer higher RV.

****Inputs:**** undo cost

****Outputs:**** preference/pass

****Example:**** Try a pilot before full rollout.

Agency (AG)

****Mnemo:**** AG

****Definition:**** Preserve the person's capacity to choose and act.

****Inputs:**** agency impact

****Outputs:**** pass/fail

****Example:**** Offer options, don't force outcomes.

Causal Admissibility (CA)

****Mnemo:**** CA

****Definition:**** Action respects allowed cause■and■effect structure.

****Inputs:**** causal constraints

****Outputs:**** pass/fail

****Example:**** No manipulative hidden loops.

Viable Potential (Φ)

****Mnemonic:** PHI**

****Definition:**** Set of states kept reachable by gate passing steps.

****Inputs:**** policy + environment

****Outputs:**** Φ updated/unchanged

****Example:**** Do not shrink future options with today's choice.

Profiles

****Mnemonic:**** —

****Definition:**** Declared caps/thresholds for a community or context.

****Inputs:**** cap settings

****Outputs:**** config

****Example:**** Neutral_SMM or community profile.

A=B (Translation Principle)

****Mnemonic:**** —

****Definition:**** Different words are fine if gates/endpoints/order are preserved. Verdicts match.

****Inputs:**** mapping

****Outputs:**** equivalence note

****Example:**** Light/Good/Truth/Actualized $\leftrightarrow$ Aligned limit.

Lexicode

****Mnemonic:**** RI-HC-C-F-EG-B-O-RV-AG-CA-PHI # csum

****Definition:**** Prefix-free word for tokens + params + checksum bound to definition.

****Inputs:**** mnemonic tokens, params, checksum

****Outputs:**** code string

****Example:**** RI-HC01-C80-F05-EG05-B-O-RV-PHI # 86602E

Resonance Marker (R■marker)

****Mnemo:**** note

****Definition:**** A personal sign that encourages. Logged as note; never changes gates.

****Inputs:**** free text

****Outputs:**** audit note

****Example:**** Version number felt meaningful.

I■Mode / E■Mode / W■Mode

****Mnemo:**** RI■EG■B■O / RI■HC■C■F / full stack

****Definition:**** Head; Heart; Wisdom (integrated). Use W■Mode to commit a reversible Right step.

****Inputs:**** mode choice

****Outputs:**** draft → decision

****Example:**** Write I→E→W paragraphs, then act.

Large Experience Model (LEM)

****Mnemo:**** RI■HC■C■F■EG■B■O■RV■AG

****Definition:**** You are a model. Curate inputs, keep gates on, choose better■than■baseline steps.

****Inputs:**** data, values

****Outputs:**** next best step

****Example:**** Mute one noisy source; add one high■signal source.
